Kumar Raj ~ Modified: September 27th, 2022 ~ PDF ~ 6 Minutes Reading Are you also looking for the solution to break up PDF into separate files? Don’t want any complex method for the same? Then don’t worry because you are at the right page. Here we have discussed different methods that will let you know how to break up PDF into multiple PDFs. So continue reading. PDF is a widely used file format for sharing the information across the internet. These files are universally readable on any platform like Mac, Win, Linux, etc. But, there are situations when users want to share a few PDF pages rather than sharing the whole document. Therefore, in such cases, it becomes necessary to break up PDF into multiple PDFs. Now, to perform the same, two simple methods are discussed here one is manual and the other is by using a professional tool that can be downloaded from the below-mentioned button. These two methods will help you to break PDF into smaller PDFs quickly. Some Queries Faced By Users: 1- How to break up PDF into individual pages without Adobe Acrobat?2- How to break one PDF into multiple PDFs on Windows 10?3- How can I create multiple PDF from single PDF?4- How can I break PDF file into pages?5- How do I break PDF document into separate pages on Windows 7?6- How can I break up PDF with Adobe Reader? Break PDF into Smaller PDFs With Adobe Acrobat Pro DC Adobe Pro DC provides the feature i.e. Organize Pages. This feature is having a “Split option” which can be used to create multiple PDFs from a single PDF document. Now, follow these simple steps & break up PDF into multiple PDFs: 1- Open the PDF document using Adobe Acrobat Pro DC2- Click on the View option & select Tools3- After selecting the Tools option click on the Organize Pages & hit the Open button 4- Click the Split option present at the top of the screen5- Now, you can select the Page Range as Even, Odd, Landscape, Portrait or all pages 6- Otherwise you can split by number of pages, file size or by top-level level bookmarks The “Number of pages” option split the document into a file that contains up-to a certain amount of pages. Enter the number of pages in the textbox i.e “Pages” (the number specified must be greater than 1). The “File Size” option will split the document into files that are up to a certain megabyte limit. Basically, this feature helps the user to share the files easily. The “Top-level bookmarks” option can be used to split the document based on the bookmarks that users place in their PDF documents. This feature divides a book into individual files based on chapters. 7- Now, after selecting the required options click the Split button 8- Lastly, the confirmation message gets displayed to the user Note: To break up PDF into separate files with this method, it is necessary to have the full version of Adobe Acrobat Pro DC program. But, there are many users who can’t afford such an expensive program. Therefore, for such users, a simple & affordable program is offered by SysTools. How to Break up PDF into Multiple PDFs Without Adobe Acrobat SysTools provides the best PDF Splitter Software which can create multiple PDFs from a single PDF document. The software offers multiple advanced features that will help the user to carry out the entire task efficiently. With the help of this tool, users can break PDF into smaller PDFs on the basis of the page number, range, size, each page, even or odd pages. One of the unique offered by the tool is that users don’t need to worry about the file size because this software can break large PDF files of any size. The graphical user interface of the software is very simple and easy to use. Moreover, the utility is designed in such a way that it can be easily installed on any version of the Windows Operating system i.e. 10, 8.1, 8, 7, etc. Important Note: If the file is user-level password protected then this tool provides the option to add the password for that secured PDF document. Once the password is added the software will process the files further. The tool has inbuilt functionality to remove password security from PDF documents. But, if the file is restricted then, in such cases the user to un-restrict the document first & then use this tool for breaking up PDF into multiple PDFs. Simple Steps to Break up PDF into Separate Files 1- Download and run the software on Windows machine 2- Click on Add Files / Add Folder option 3- Choose the desired Split PDF option (i.e. by Page Number, Size, Range, Even Pages, Odd Pages & Each Page) 4- Click on Change button & select the destination path 5- Then, click on the “Split” button to start the process 6- The “PDF files have been Splitted Successfully” message got displayed Conclusion How to break up PDF into multiple PDFs is the most commonly asked query by the users. This is because at times users want to share the particular page or content of a PDF file with their colleagues or team-mates or they want to print the required part of the PDF. Therefore, all such cases arise a need to break PDF into smaller PDFs. Frequently Asked Questions How to break PDF into individual files? Use the “Split by Each Page” option of the tool and break pdf pages into individual files. How to break up PDF on Mac operating system? The software is also available for Mac OS users to break large PDF documents. Is it possible to use this tool on Windows OS 10? Yes, of course, this tool can be easily run on Windows OS and below versions. Acrobat User Guide Introduction to Acrobat Workspace Creating PDFs Editing PDFs Scan and OCR Forms Combining files Sharing, reviews, and commenting Saving and exporting PDFs Security Electronic signatures Printing Accessibility, tags, and reflow Searching and indexing Creating PDF indexes Searching PDFs Multimedia and 3D models Print production tools (Acrobat Pro) Preflight (Acrobat Pro) Color management Learn how to rotate, move, delete, extract, or renumber pages in a PDF. To manipulate pages in a PDF, make sure that you have permissions to edit the PDF. To check, choose File > Properties, and then click the Security tab. Permissions appear in the Document Restrictions Summary. You can rotate all or selected pages in a document. Rotation is based on 90° increments. You can rotate pages using the rotate tools in the Page Thumbnails pane or using the Rotate option. Open the PDF in Acrobat, and then choose Tools > Organize Pages or choose Organize Pages from the right pane. The Organize Pages toolset is displayed in the secondary toolbar. The Organize Pages toolset in the secondary toolbar. In the secondary toolbar, specify the page range on which you want to apply the rotation. You can choose Even Pages, Odd Pages, Landscape Pages, Portrait Pages, or All Pages, or you can enter the page number you want to perform the operation on. After specifying the page range, for Direction, select either counterclockwise 90 Degrees or clockwise 90 Degrees . You can also apply the page rotation on a specific page by clicking the counterclockwise or clockwise rotation buttons displayed in the page thumbnail view. Page rotation in the page thumbnail view. To temporarily change your view of the page, choose View > Rotate View > Clockwise or Counterclockwise. The original page orientation is restored the next time you open the PDF. Extraction is the process of reusing selected pages of one PDF in a different PDF. Extracted pages contain not only the content but also all form fields, comments, and links associated with the original page content. You can leave the extracted pages in the original document or remove them during the extraction process—comparable to the familiar processes of cutting-and-pasting or copying-and-pasting, but on the page level. Any bookmarks or article threading associated with pages are not extracted. Open the PDF in Acrobat, and then choose Tools > Organize Pages or choose Organize Pages from the right pane. The Organize Pages toolset is displayed in the secondary toolbar. In the secondary toolbar, click Extract. A new toolbar appears below the secondary toolbar with the commands specific to the Extract operation. Choose Extract from the new toolbar to pull one or more pages from the PDF file. Specify the range of pages to extract. You can choose Even Pages, Odd Pages, Landscape Pages, Portrait Pages, or All Pages, or you can enter the page number you want to perform the operation on. In the new toolbar, do one or more of the following before you click Extract: To remove the extracted pages from the original document, select Delete Pages After Extracting. To create a single-page PDF for each extracted page, select Extract Pages As Separate Files. To leave the original pages in the document and create a single PDF that includes all of the extracted pages, leave both check boxes deselected. The extracted pages are placed in a new document. The creator of a PDF document can set the security to prevent the extraction of pages. To view the security settings for a document, choose File > Properties, and select the Security tab. Extract random pages from a PDF You can also select and extract discontinuous pages from the page thumbnails in the left navigation pane of Acrobat. Right-click a page thumbnail in the left pane, and then click Extract Pages. In the Extract Pages dialog box, specify the pages you want to extract and then click OK. Add a custom page to a PDF You can add a custom page to your PDF using the integrated Adobe Express app, which offers thousands of templates to choose from while organizing pages in Acrobat. Open the PDF in Acrobat and click Organize Pages in the right pane. On the Organize Pages toolbar, click Add Custom Page. A new window opens with page editing options powered by Adobe Express. Choose the template you want to use for your new page, and then use the editing controls to change any colors or text to your liking. Once you have finished customizing the page, click Add to add the page to the PDF. The new page is added to the PDF. You can drag the added page to the desired position in the PDF. Click Edit if you want to make additional changes to the new page. The editing panel opens. Click Save when you've finished. Once you save your PDF, you can't edit the added page by opening the Adobe Express app from Acrobat. Click Close and save the PDF. This will finalize the changes on your new page, and you won't have access to the Edit option on that page going forward. Split PDFs into multiple documents You can split one or more PDFs into multiple smaller PDFs. When splitting a PDF, you can specify the split by the maximum number of pages, maximum file size, or top-level bookmarks. Open the PDF in Acrobat, and then choose Tools > Organize Pages or choose Organize Pages from the right pane. The Organize Pages toolset is displayed in the secondary toolbar. In the secondary toolbar, click Split. A new toolbar appears below the secondary toolbar with the commands specific to the Split operation. Choose Split in the secondary toolbar to see the document splitting options. In the Split By drop-down list, select the criteria for dividing the document: Specify the maximum number of pages for each document in the split. Specify the maximum file size for each document in the split. If the document includes bookmarks, creates one document for every top-level bookmark. To specify a target folder for the split files and filename preferences, click Output Options. Specify the options as needed, and then click OK. (Optional) To apply the same split to multiple documents, click Split Multiple Files. In the Split Documents dialog box, click Add Files, and choose Add Files, Add Folders, or Add Open Files. Select the files or folder, and then click OK. Move or copy pages in a PDF You can use page thumbnails in the Navigation pane or the Document area to copy or move pages within a document and to copy pages between documents. Move or copy a page within a PDF, using page thumbnails Open the PDF in Acrobat, and then choose Tools > Organize Pages or choose Organize Pages from the right pane. The Organize Pages toolset is displayed in the secondary toolbar and the page thumbnails are displayed in the Document area. The Document area changes to display page thumbnails. Select one or more page thumbnails. To move a page, drag the page number box of the corresponding page thumbnail or the page thumbnail itself to the new location. A bar appears to show the new position of the page thumbnail. The pages are renumbered. To cut or copy a page, right-click and choose Cut or Copy. Click between the page thumbnails where you want to paste the page. A blue horizontal marker shows the selected location where you want to paste. Right-click and choose Paste. You can paste the pages in another PDF as well. You can also perform the above operations in the left navigation pane by clicking the Page Thumbnails button. Copy a page between two PDFs, using page thumbnails Open both PDFs, and display them side by side. Choose Window > Tile > Vertically to display the PDFs side by side. Open the Page Thumbnails panels for both PDFs. Alternatively, go to Tools > Organize Pages on both the PDFs. Click the Page Thumbnails button in the left navigation pane to open the Page Thumbnail panel. Select the page you want to cut or copy. If you want to select more than one page, press Ctrl and then select the pages. Right-click the page thumbnail, and select Copy. In the page thumbnails of the target PDF, click between the page thumbnails where you want to paste the page. A blue horizontal marker shows the selected location where you want to paste. Right-click and choose Paste. The page is copied into the document, and the pages are renumbered. You can paste the pages in another PDF as well. Alternatively, you can also drag the page thumbnail into the Page Thumbnails panel of the target PDF. Delete or replace pages in a PDF You can replace an entire PDF page with another PDF page. Only the text and images on the original page are replaced. Any interactive elements associated with the original page, such as links and bookmarks, are not affected. Likewise, bookmarks and links that may have been previously associated with the replacement page do not carry over. Comments, however, are carried over and are combined with any existing comments in the document. After you delete or replace pages, it’s a good idea to use the Reduce File Size command to rename and save the restructured document to the smallest possible file size. A page before and after it is replaced. The page’s bookmarks and links remain in the same locations. How to delete pages, using the Delete command You cannot undo the Delete command. Choose Tools > Organize Pages or choose Organize Pages from the right pane. The Organize Pages toolset is displayed in the secondary toolbar, and the page thumbnails are displayed in the Document area. Specify the range of pages to delete. You can choose Even Pages, Odd Pages, Landscape Pages, Portrait Pages, or All Pages, or you can enter the page number(s) you want to delete. In the secondary toolbar, click Delete Pages , and click OK to confirm. You cannot delete all pages; at least one page must remain in the document. If you select Use Logical Page Numbers in the Page Display panel of the Preferences dialog box, you can enter a page number in parentheses to delete the logical equivalent of the page number. For example, if the first page in the document is numbered i, you can enter (1) in the Enter Page Range drop-down list, and the page is deleted. How to delete pages, using page thumbnails Choose Tools > Organize Pages or choose Organize Pages from the right pane. The Organize Pages toolset is displayed in the secondary toolbar, and the page thumbnails are displayed in the Document area. Select a page thumbnail you want to delete and click the icon to delete the page. Alternatively, click the Page Thumbnails button in the left navigation pane to open the Page Thumbnail panel, then select the page or group of pages you want to delete. Click Delete Pages at the top of the Page Thumbnails panel. How to replace the contents of a page in a PDF Open the PDF that contains the pages you want to replace. Choose Tools > Organize Pages or choose Organize Pages from the right pane. The Organize Pages toolset is displayed in the secondary toolbar. In the secondary toolbar, click Replace. The Select Files With New Pages dialog box appears. Select the document containing the replacement pages, and click Open. Under Original, enter the pages to be replaced in the original document. Under Replacement, enter the first page of the replacement page range. The last page is calculated based on the number of pages to be replaced in the original document. How to replace pages using a page thumbnail Open the PDF that contains the pages you want to replace, and then open the PDF that contains the replacement pages. In the Page Thumbnails panel of the PDF that contains the replacement pages, select a page or group of pages: Select the page number boxes of the page thumbnails that you want to use as replacement pages. Shift-click to select multiple page thumbnails. Ctrl-click to add to the selection. Drag a rectangle around a group of page thumbnails. Ctrl+Alt+drag the selected page thumbnails onto the Pages panel of the target document. Release the mouse button when the pointer is directly over the page number box of the first page thumbnail you want to replace so that these pages become highlighted. The pages you selected in the first document replace the same number of pages in the second document, starting at the page number you selected to drop the new pages on. The page numbers on the document pages do not always match the page numbers that appear below the page thumbnails and in the Page Navigation toolbar. Pages are numbered with integers, starting with page 1 for the first page of the document. Because some PDFs may contain front matter, such as a copyright page and table of contents, their body pages may not follow the numbering shown in the Page Navigation toolbar. Printed page numbering (top) compared to logical page numbering (bottom) You can number the pages in your document in a variety of ways. You can specify a different numbering style for group of pages, such as 1, 2, 3, or i, ii, iii, or a, b, c. You can also customize the numbering system by adding a prefix. For example, the numbering for chapter 1 could be 1-1, 1-2, 1-3, and so on, and for chapter 2, it could be 2-1, 2-2, 2-3, and so on. Using the Number Pages command affects only the page thumbnails on the Pages panel. You can physically add new page numbers to a PDF using the headers and footers feature. In the left navigation pane, click the Page Thumbnails button to open the Page Thumbnails panel. Choose Page Labels from the Options menu. The Number Labels command is in the Options menu of the Page Thumbnails panel. Specify a page range. (Selected refers to pages selected in the Page Thumbnails panel.) Select one of the following, and then click OK: Starts a new numbering sequence. Choose a style from the pop-up menu, and enter a starting page number for the section. Specify a Prefix, if desired. Extend Numbering Used In Preceding Section To Selected Pages Continues the numbering sequence from previous pages without interruption.
